Welcome Keynote

[Copy link to share session](#)

Join Michele Turner,
Senior Director of
Product Management, to
learn why Google is the
best platform for smart
home developers to build,
innovate, and grow.

We'll show you new ways Google is empowering developers to create experiences that let users do more with your devices across Android, Nest, the Google Home app, and Google Assistant. We'll preview upcoming tools you'll use to build your next devices and apps using Matter and Thread – technologies that are transforming the smart home industry.

Developer
Keynote:
Building Great
Experiences
with Google
Smart Home

 [Copy link to share session](#)

Whether you are writing firmware for your devices, or building mobile applications to create new experiences for your users, join Marco Cavalli, Product Manager, and Jung-Yu (Gina) Yeh, Technical Solutions Engineer on the Nest team, to learn how Google is making it easy for you to build with

Google. In this session we provide an overview of the tools and solutions that Google is building to enable you to integrate quickly and reliably. Google's smart home developer tools simplify complexity and merge seamlessly into your existing workflows, so that you can focus on what matters the most: creating innovative solutions that delight your customers.

8 MINUTES

Mobile Development for Matter

[Copy link to share session](#)

To make smart home app experiences more seamless, the Google Home Mobile SDK makes it easy to build Matter apps on Android. With this intuitive tool, you can build apps with consistent device commissioning and sharing experiences, creating great out of box experiences that quickly connect devices to Google Home and your apps.

Learn about how Google is supporting Matter on Android through Google Play services, and preview the Google Home Mobile SDK and accompanying user journey in this session.

James Romo
Technical Solutions Engineer
Google

14 MINUTES

Developer Tools for Matter

[Copy link to share session](#)

Get a walkthrough of the new Google Home IDE plugin for VSCode for Matter and the Google smart home ecosystem. Developers can use this tool to view log messages, debug, and test your devices.

14 MINUTES

Smart Home Tools and Updates

[Copy link to share session](#)

Learn about new developer tools and updates for Google Home and Device Access. Learn about Google's quality efforts, updates to WebRTC, the Test Suite, Analytics, as well as get a preview of the Smart Home Playground — a new tool for prototyping devices.

E John Feig
Technical Lead, Technical Solutions Engineer
Google

19 MINUTES

Workshop: Smart Home Debugging Tools

[Copy link to share session](#)

This workshop will walk you through the debugging flow for Smart Home and Matter projects, and provide an overview of our debugging tools. Learn how to analyze your error logs and metrics using

Smarthome Analytics and
test your integration
quality with Test Suite.
