Nest is the first thermostat that learns from you. Stay comfortable when you're home, save energy when you're away.

inside and out

Builds a schedule

Nest programs itself in about a week. It creates a personalized schedule based on the temperature changes you've made. This flexible schedule adapts to your changing life.

leaf icon

The Leaf

The Nest Leaf appears when you set a temperature that saves you energy—and money. The Leaf guides you in the right direction and helps you be energy-efficient.

auto away

Auto-Away

About two hours after you've left the house, Nest will sense you've gone and adjust the temperature to avoid heating or cooling an empty home.

energy history

Energy History

Nest shows you how much energy you've used and if your temperature adjustments, Auto-Away or the weather affected your energy use most.

Programs itself

Nest Sense

Senses and learns from you.

Nest Sense™ is a combination of sensors and algorithms that help Nest understand what's happening around it. It's all built in.

Activity sensors

Nest's activity sensors have a 150° wide-angle view so Nest knows when to set itself to Auto-Away.

Temperature sensors

Three temperature sensors track your home's heating and cooling. A one-degree difference can reduce energy use up to 5%, so precision is important.

senses

Weather aware

Nest uses its Wi-Fi connection to keep an eye on current weather conditions and forecasts so it can understand how the outside temperature affects your energy use.

Senses your approach

Walk up to Nest and it'll light up, but not too brightly. Light sensors automatically set Nest's brightness so it won't blind you at night.

Nest Sense
Connected

Monitor Nest and adjust the temperature from the office, the car, your smartphone, your couch, anywhere. You just need Wi-Fi and an Internet connection at home.

Real-time control

Control your home's temperature from your laptop, smartphone or tablet. Make adjustments in real-time, miles from home.

Your Nest Account

Log in online or download the Nest Mobile app to your smartphone. You'll be able to see and adjust your schedule, change the temperature and check weather.

Automatic updates

Software updates will load automatically as long as Nest is connected to your Wi-Fi.

Secure, private & reliable

Nest is completely secure and uses public key cryptography. Its security features include HTTPS, SSL and 128-bit encryption.

Connected
Simple

>

Since Nest programs itself, your job is easy.

Just turn the ring

Turn the ring to your preferred temperature. Nest will learn what you like and build a personalized schedule.

Save energy all year

Teach Nest good habits in the first week and it'll keep them up all year long. Just turn Nest down at night or when you leave the house and don't turn the temperature up too high or down too low. After a week, Nest will remember you.

Simple
At home

The Nest Learning Thermostat adapts to anyone, anywhere.

Multiple thermostats

Up to ten Nest Learning Thermostats can work together to save energy and can be controlled from one Nest Account.

At home

Installation

If you're handy around the home you can install Nest yourself, or we can help you find a local professional to install Nest.

Nest in two homes

Manage your second home from the web, the Nest Mobile app, or the sofa.

Ever installed a light fixture? Then you shouldn't have any trouble with Nest. However, depending on your system, it may be a more involved project. We'll help with guides, videos and support.

If you'd like a professional to install your Nest, we can help. Use our "find an installer" tool to see what's available in your area.

Will it work in your home?

Compare
See if Nest works for you.

Find an installer

Find options in your area.

Upgrade your thermostat

Upgrade your thermostat

Clip, strip and connect two to seven low-voltage wires to Nest. An experienced do-it-yourselfer will be comfortable installing Nest.
